Asset Managers Requirements for BIM

Delivering what Information Asset Managers
can Trust & what they Need

The Silo Issue

- Discipline Silos
- Technology Silos

GIS

BIM

AIM

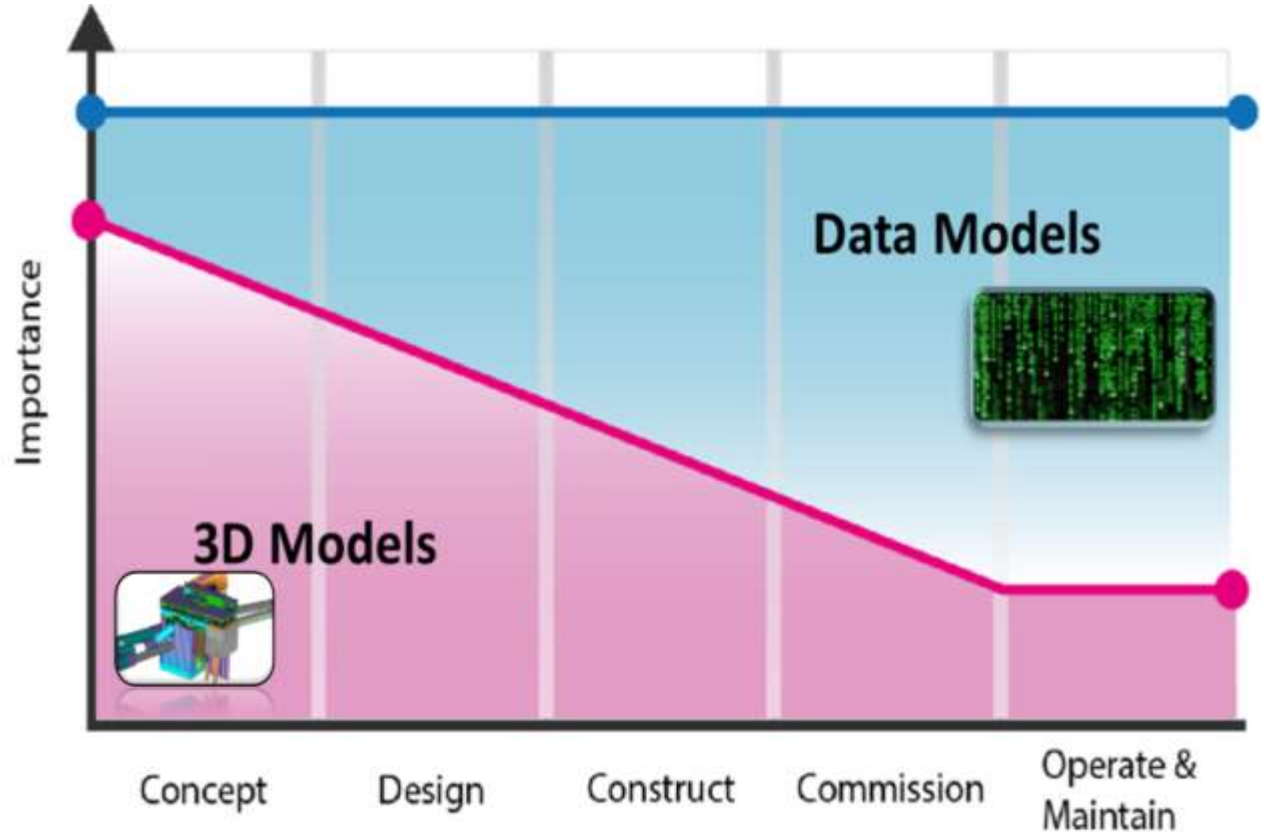

INFORMATION

Graphical / Non-Graphical Models

- Information
- Data environment
- Data integrity
- Collaboration
- Technology
- Asset life-cycle
- New processes
- New project culture

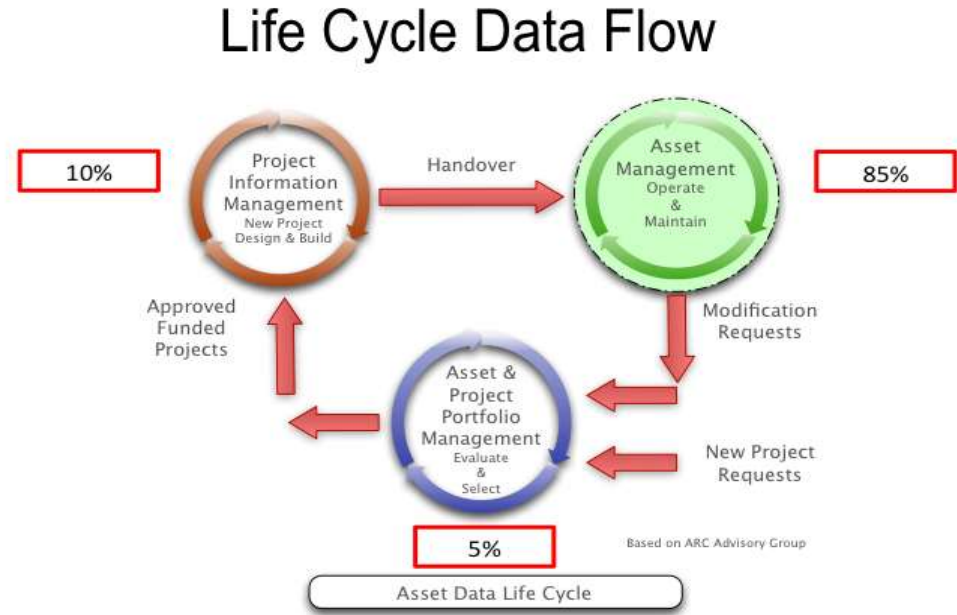

In Infrastructure

THE ASSET IS THE BUSINESS

Life Cycle Information

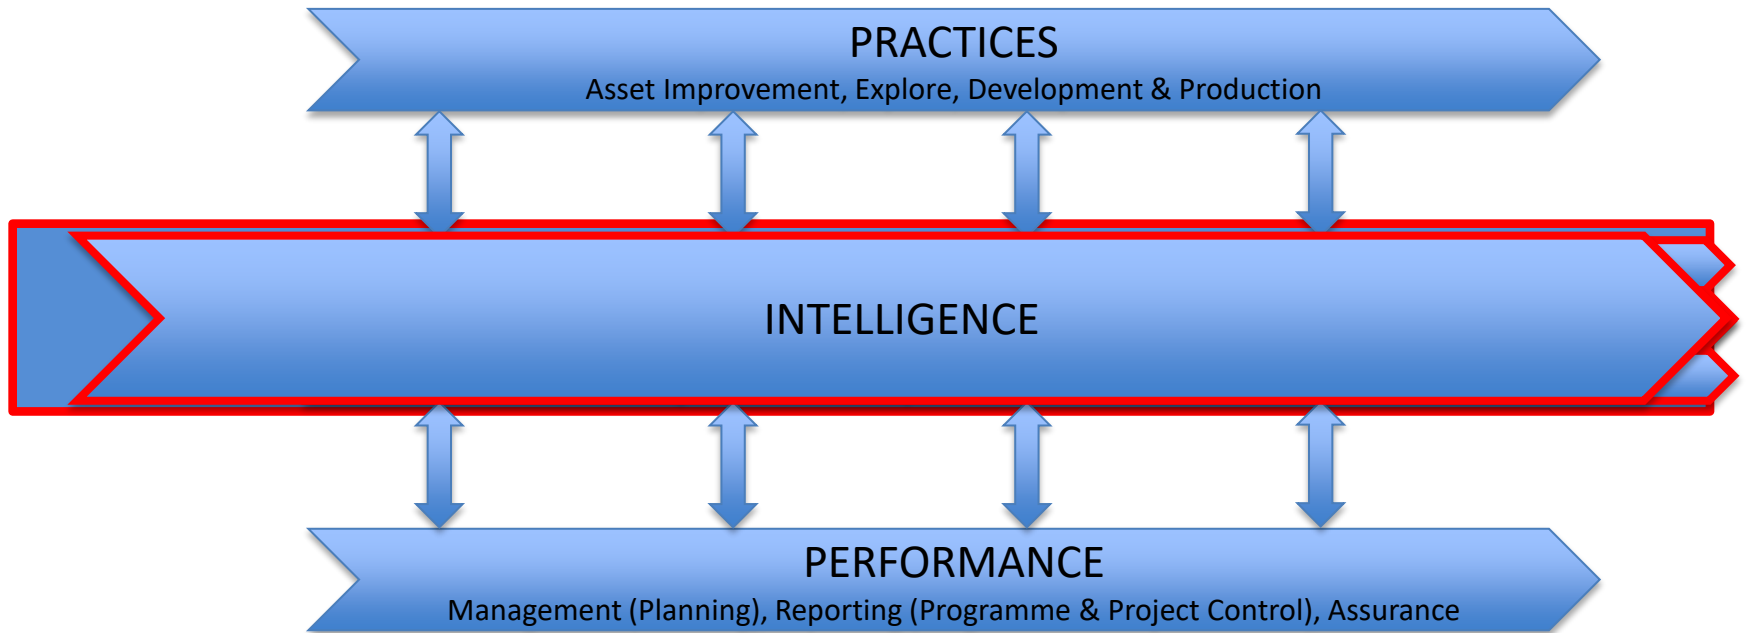

Asset information needs to cover the Life Cycle of an asset hence information captured and managed should cover the asset life cycle and not just one phase such as design or construction.

An asset begins life at
conception not when its
built and handed over

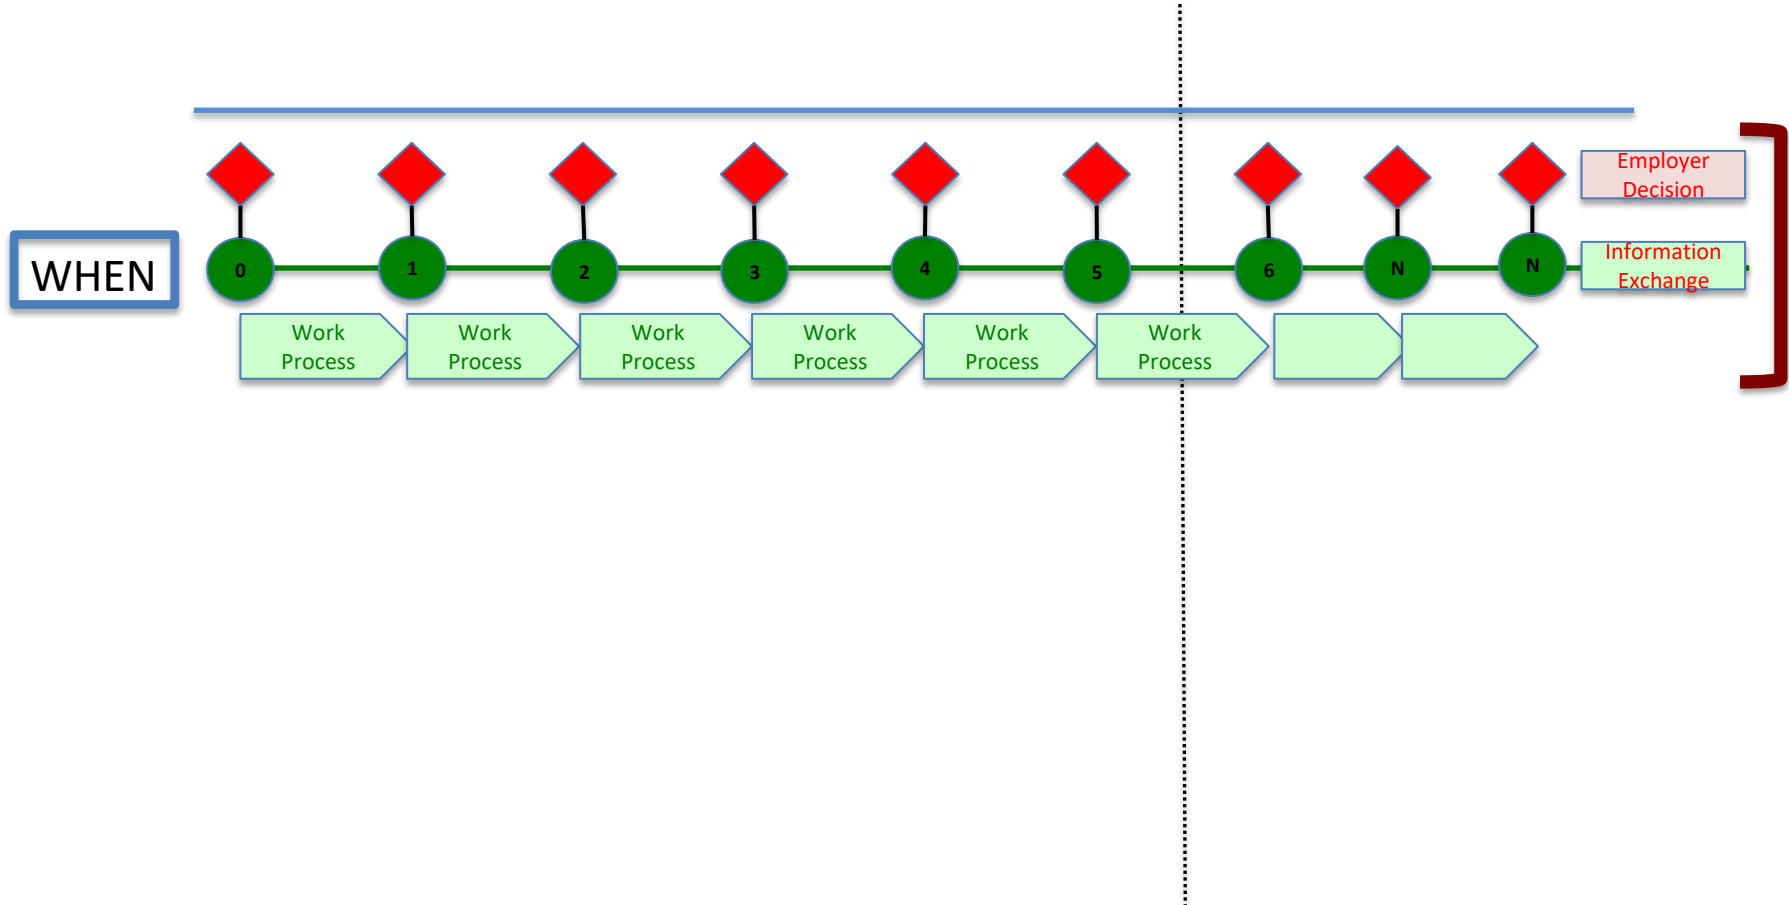

The Information/Intelligence Spine

When

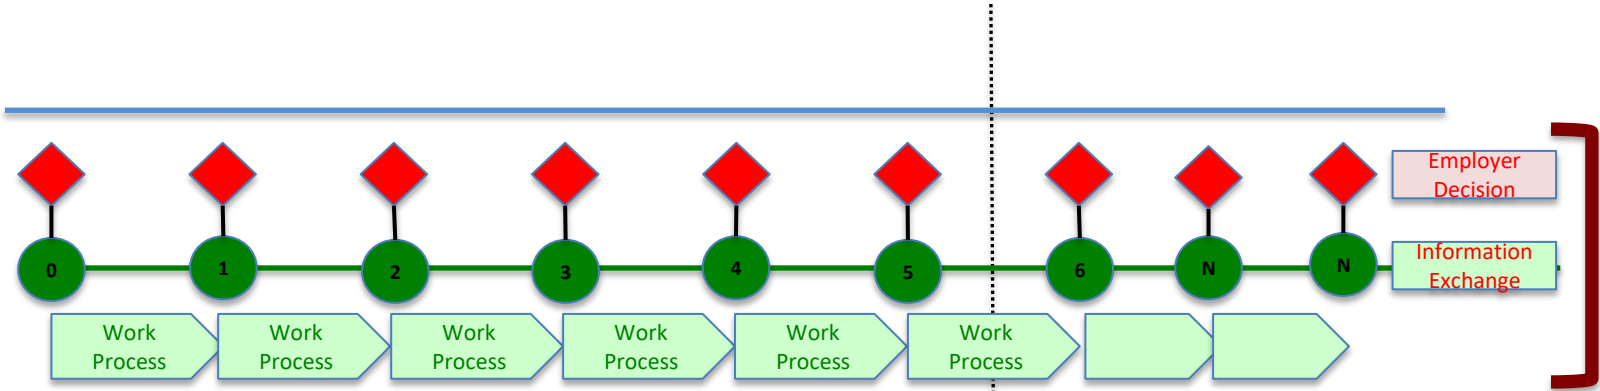

When - Plan of Work Stages

Information
Requirements Driven

WHEN

WHAT

Employer Information Requirements (EIRs) What Information is Required at each defined stage

LoD & LoI

Decisions Driven by Information Requirements

- Plain Language Questions (PLQs)
- Drive out requirements
- Lead to Information Delivery that can be tested for content and completeness
- Inform the delivery decision process

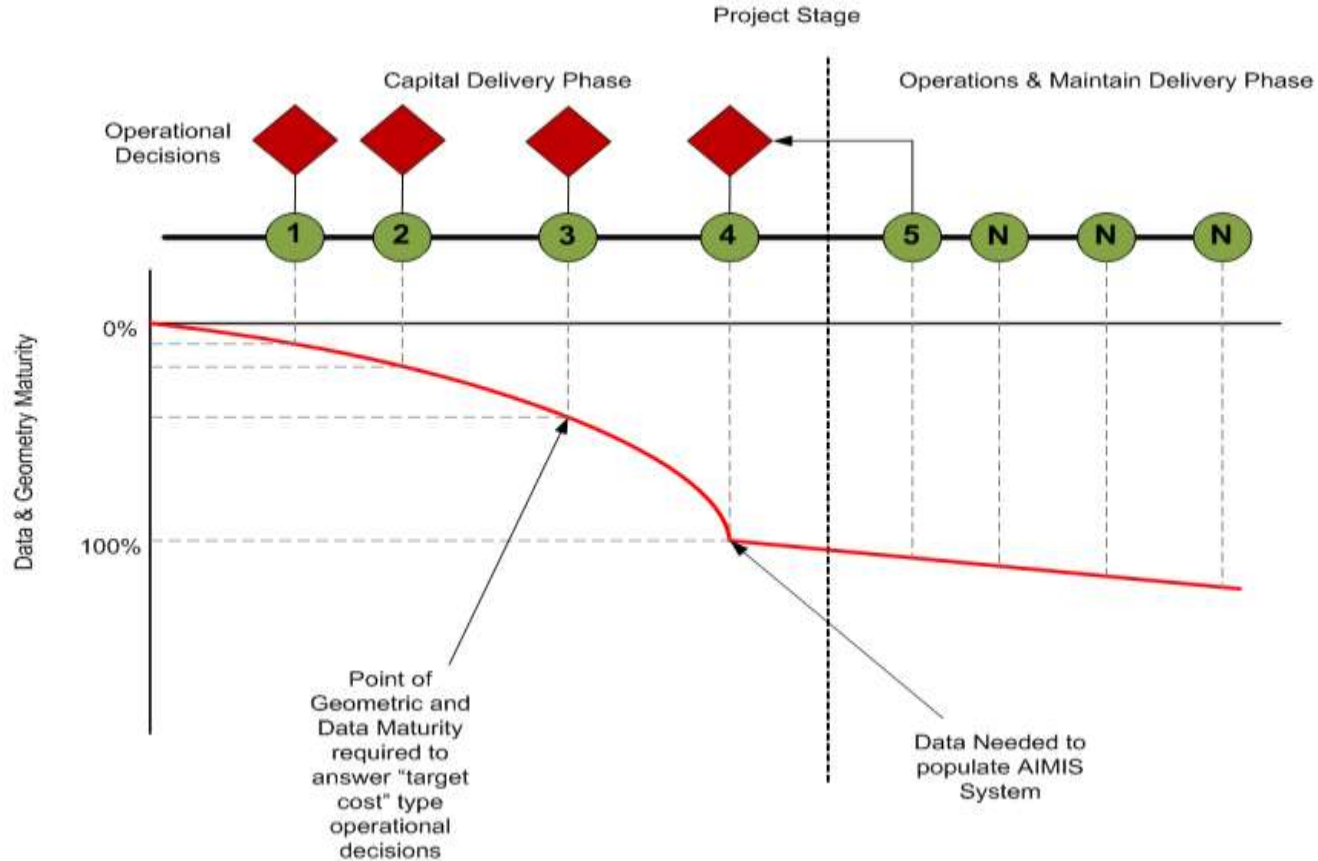

Information Management Requirement

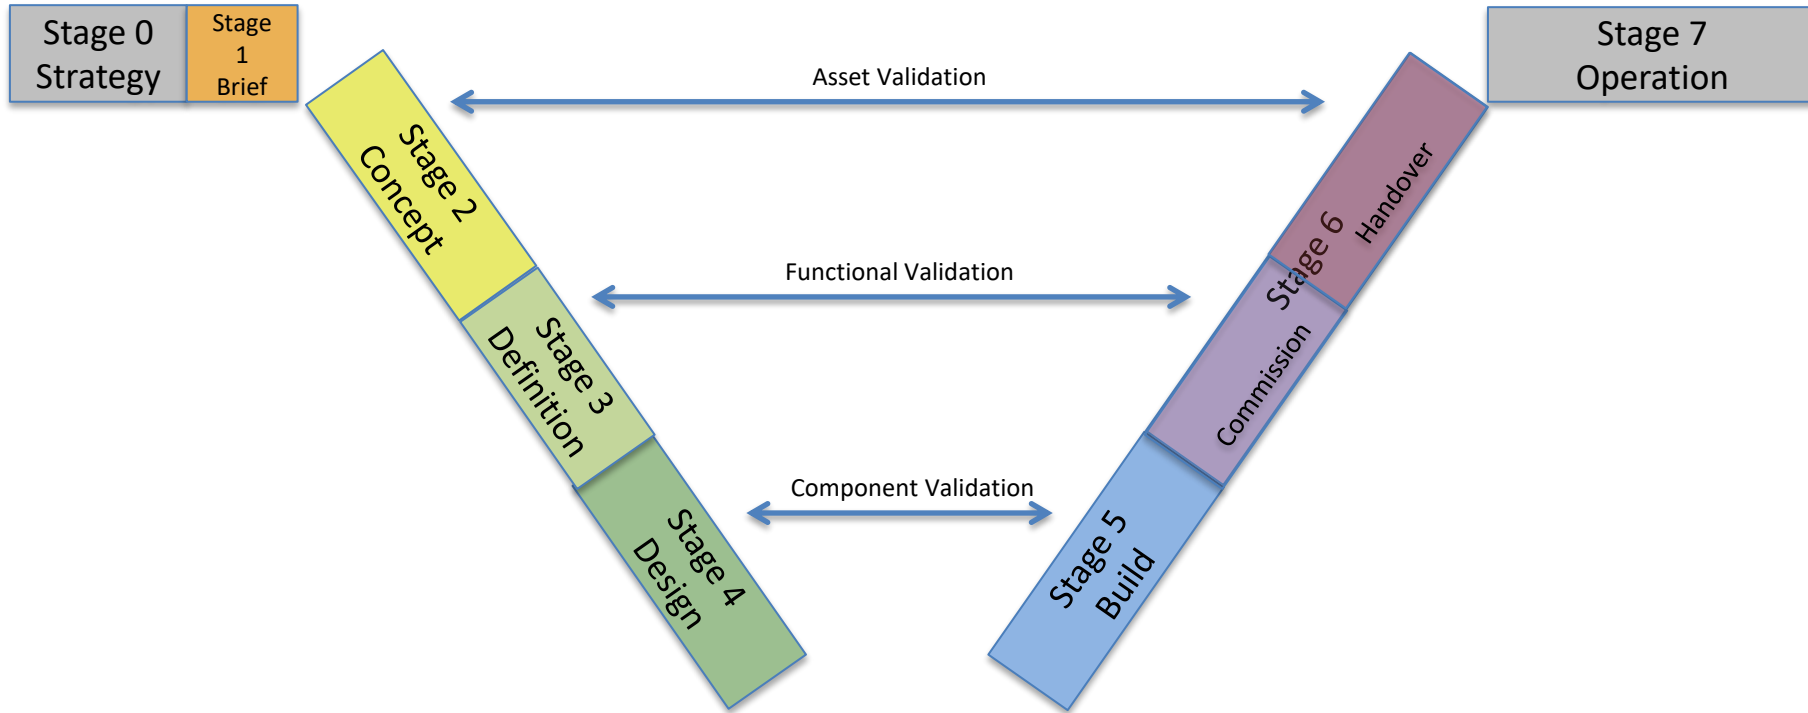

- Information management includes:
 - Organisation Strategy Management
 - Tactical Portfolio Management
 - Operational Management
 - Day to Day Maintenance
 - Asset Acquisition
 - Strategy
 - Concept
 - Design
 - Construct
 - Commission

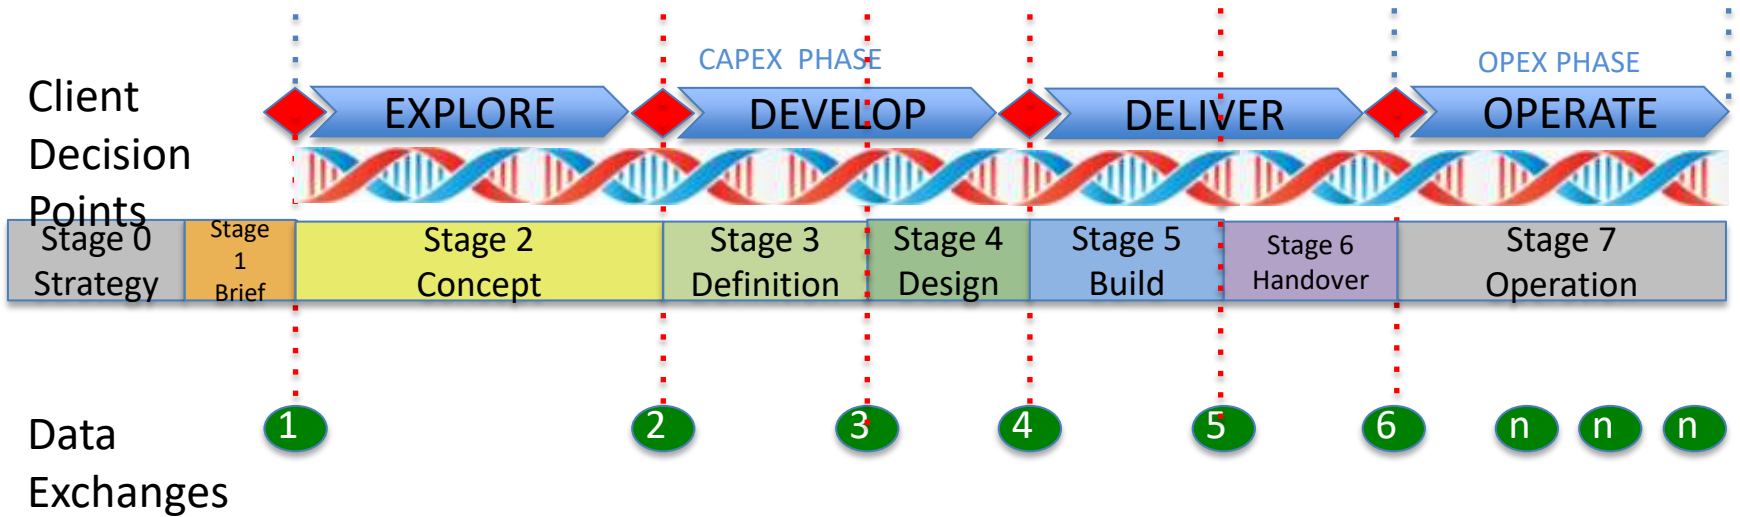

Progressive Information through the Stages

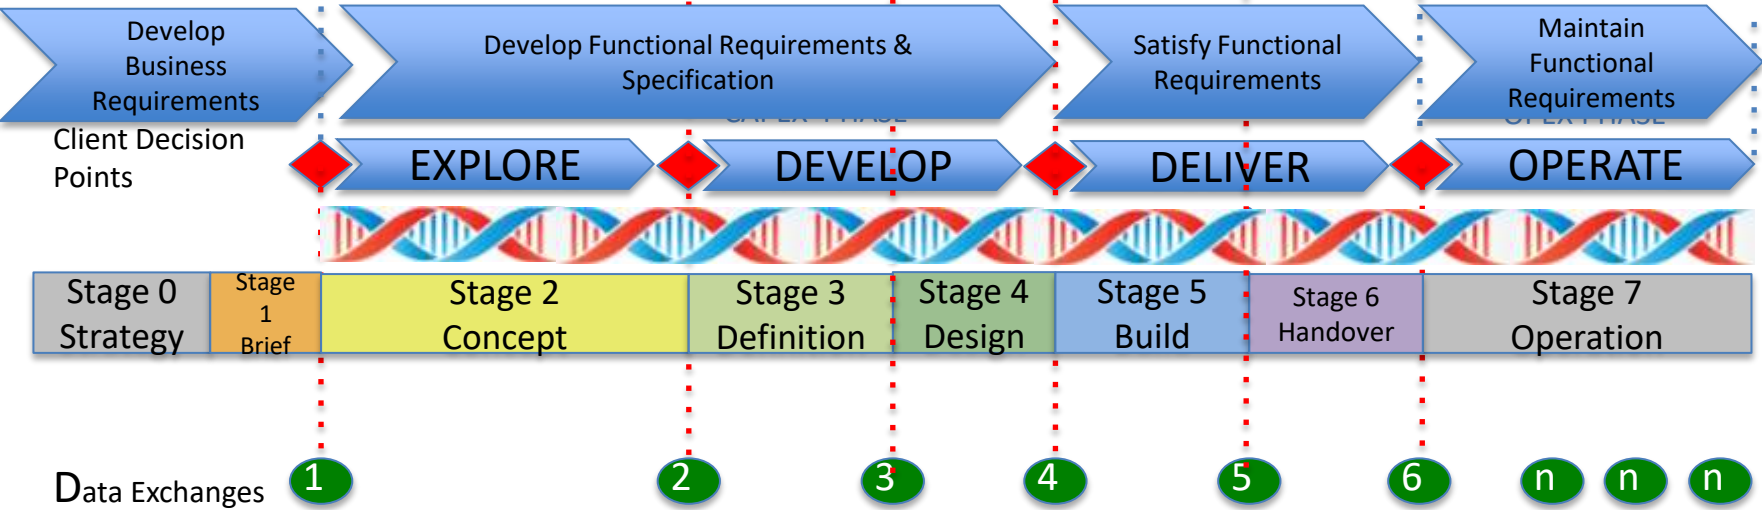

Systems Approach to Information Delivery

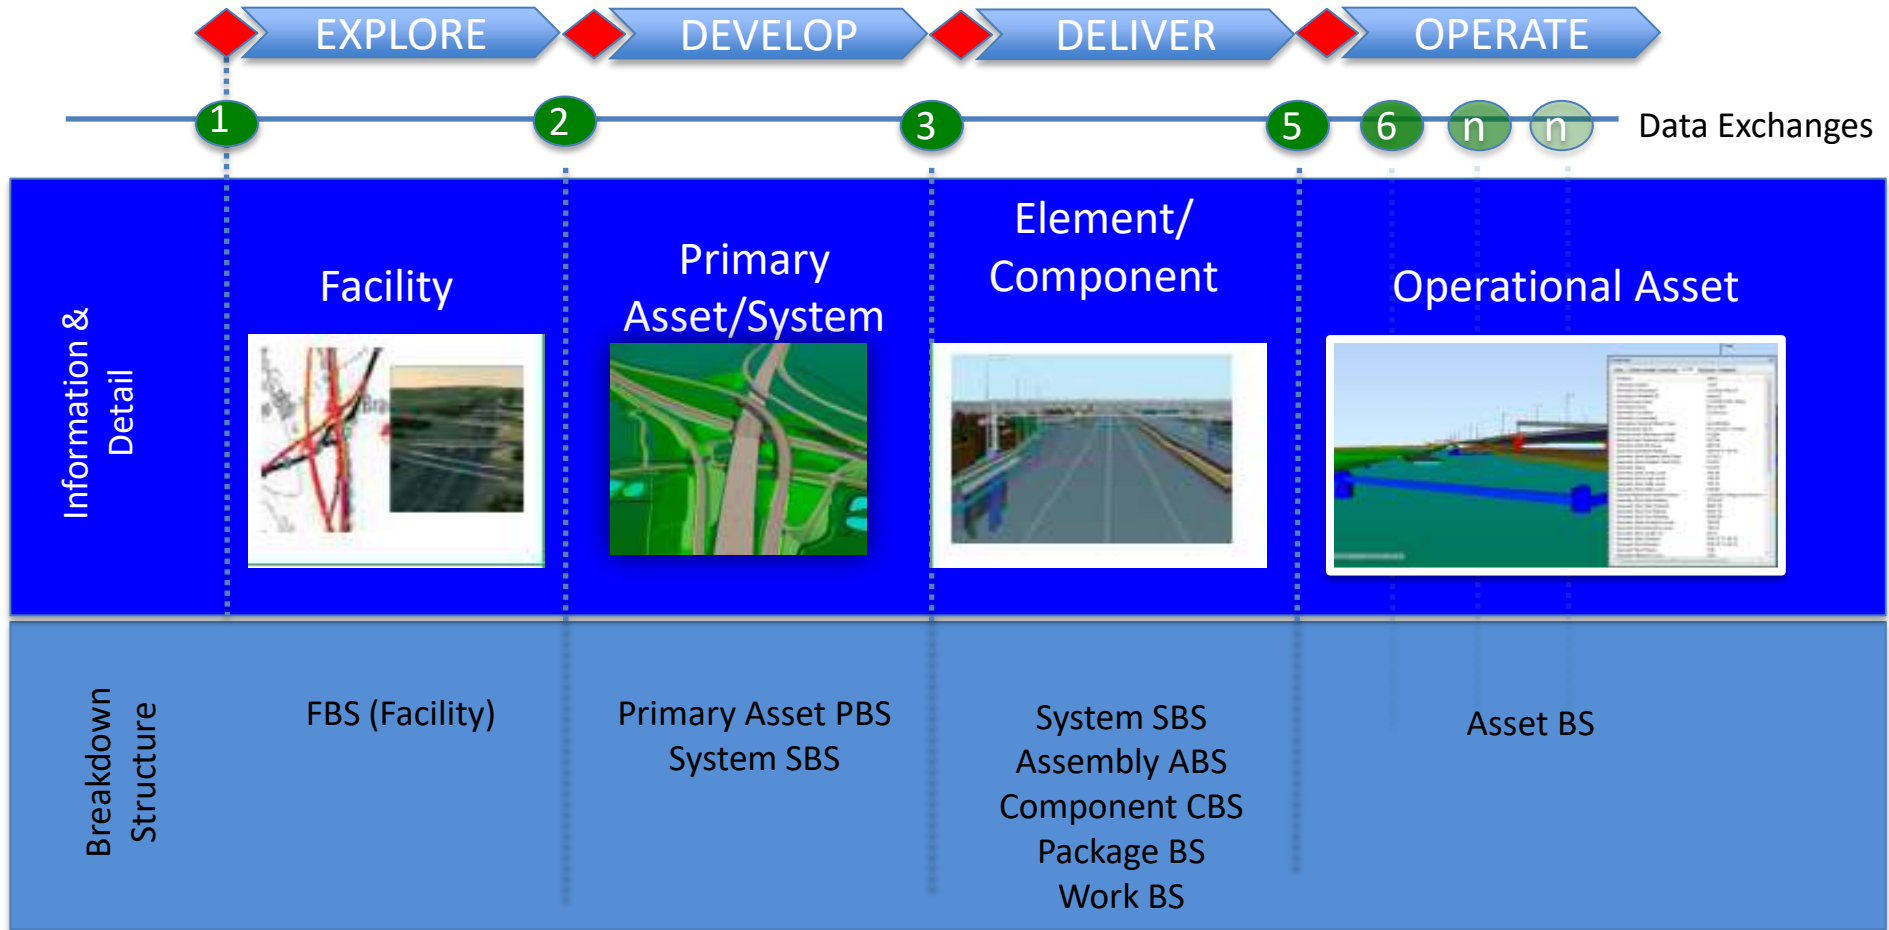

Progressive Information Maturity

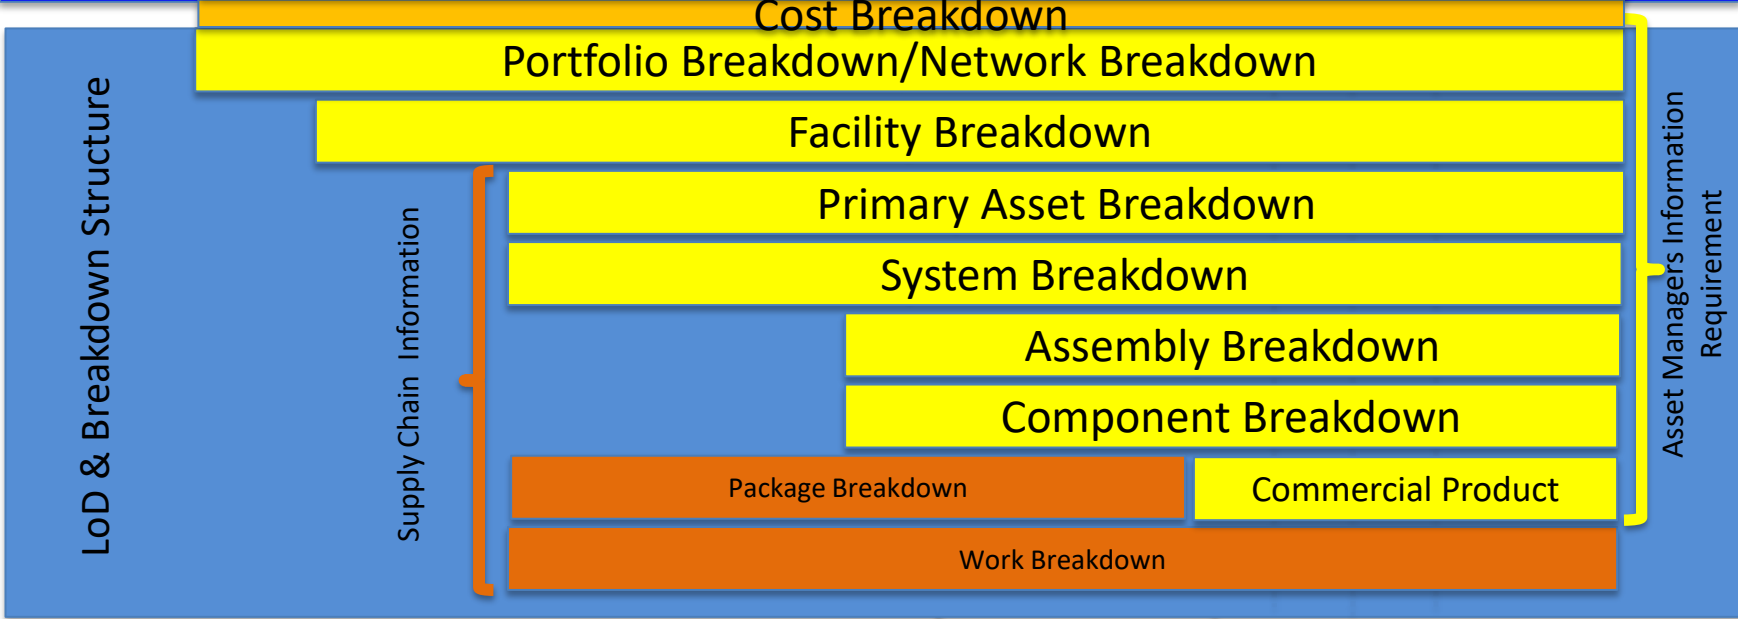

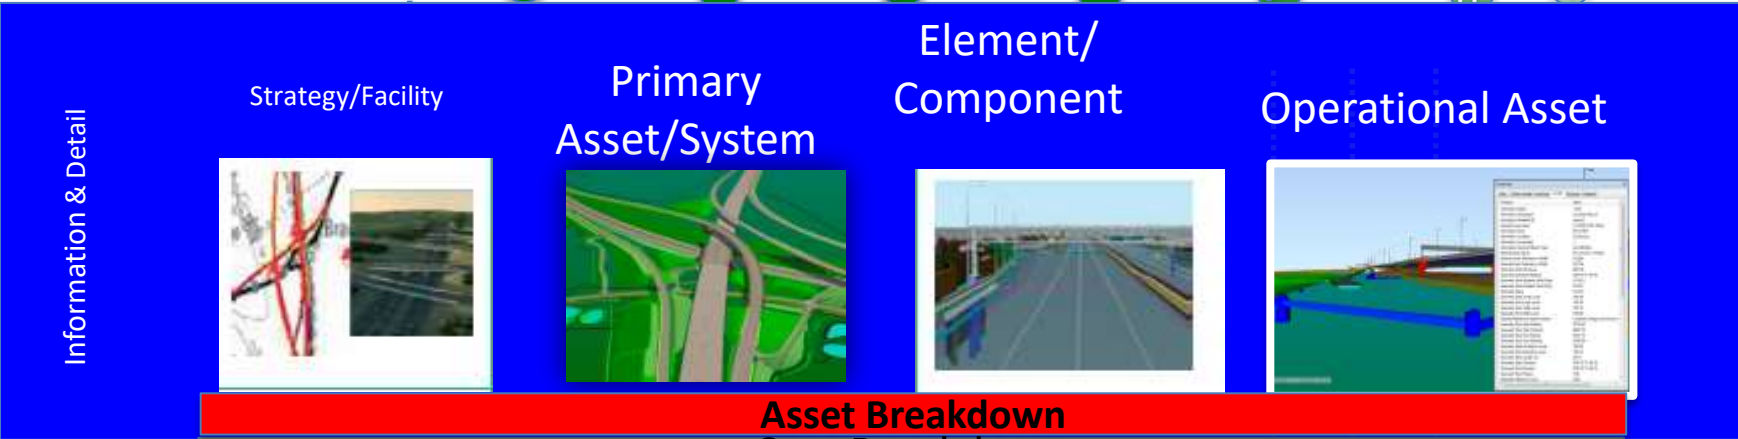

Stage by Stage Information Requirements

Increasing Information Level of Definition & Maturity through Stages

Object Type Libraries/AD4s

ASSET DATA DICTIONARY DEFINITION DOCUMENT (AD4) L152 – DIAPHRAGM WALL

Document Number: CRL1-XRL-Z3-ADDSD-CR001-50031
Document Revision: 2.0

Document History

Revision:	Date:	Prepared by:	Checked by:	Authorised by:	Reason for Issue:
1.0	02-Oct-12	Nick Millar White	Julian Schwarzenbach	Ross Denton	First Issue
2.0	23-Apr-2013	Nick Millar White	Kirsten Martindale	Ross Denton	Standardisation of Attribute Names and New Branding

CRL1-XRL-Z3-ADDSD-CR001-50031 Revision 2.0

2 Asset Tag Identification Rules

Assets will be identified as required by the Asset Identification Standard in the following format:
<LCS Code>-<Function Code>-<Incremental number to ensure uniqueness>
e.g. C125-BRS-12345

Diaphragm Walls are constructed of a number of individually poured sections with joints between each section. Each individual section/pour does not constitute an individual asset. The Asset will constitute a continuous run of individual sections/pours. The asset would be deemed to have finished at the last section/pour or where the wall meets a corner (with another wall).

Diaphragm wall = 1 Asset to be Tagged
