BIM Maturity Measurement

The global BIM maturity initiative

With uncertainty surrounding what the UK Government's BIM Level 2 is and how to achieve it, and the lack of consistent guidance on how to apply BIM progressively on projects, Arup identified a need for a maturity model to help professionals benchmark their performance and set targets for improvement – whether for efficiency, reliability, repeatability or improved design.

In 2013 we could find no tools to assess BIM maturity of projects, as opposed to organisations, that could be applied at scale. So we developed the Arup BIM Maturity Measure (BIM-MM) and made it freely available to the wider industry to spread awareness, demystify BIM, and to communicate a clearer vision of the core components of BIM.

It became a useful and supported tool, and between 2013 and 2015 we measured over 300 projects. But, its use was optional and mainly in the UK. So, in 2016 we integrated the tool into our business-as-usual project delivery. This initiative, led by the UK, started in March 2016 and continues today, measures all applicable BIM projects in all Arup offices. We assess all relevant Arup projects as they begin at appropriate points in their lifecycle; to date we've measured 1313 projects.

Building information modelling (BIM)

The BIM Maturity Measure model

The Arup BIM Maturity Measure is a simple tool to assess the maturity of BIM implementation within projects. It draws on work by Penn State University under the Creative Commons 3.0 licence. Through use of the BIM Maturity Measure we are able to assess and adopt a common view of what is BIM best practice and the depth of its diffusion across our Regions and Groups. It is a discipline-agnostic tool that seeks to measure just how much a project has used BIM and how successful this has been. We are making the BIM Maturity Measure available for wider industry use in order to demystify BIM, reduce ‘BIMwash’ and help raise capability across our industry.

It was launched on 2nd December 2014 at AutoDesk University 2014 and is available here to [download](#) along with the presentation shown at the event. If you need information regarding the BIM Maturity Model, please email BIM.Maturity@arup.com.

Common Data Environment

The image displays four screenshots illustrating a Common Data Environment (CDE) setup:

- Top Left:** A screenshot of a project management tool showing a tree view of project components and a table of tasks. The table includes columns for ID, Name, Status, and Date.
- Top Right:** A screenshot of a web portal for 'Business Collaborator' showing a search bar, project details, and a list of tasks.
- Bottom Left:** A screenshot of a 'My Tasks' dashboard showing a list of tasks and a 'My Recent Documents' section.
- Bottom Right:** A screenshot of a SQL query window showing a list of project data and a results table.
